**Honeywell Solstice® LBA, Agente de Expansão de
Baixíssimo GWP na Cadeia do Frio (Alimentos)**

Honeywell
THE POWER OF CONNECTED

Agenda

- **Honeywell** quem somos
- Agentes expansores – regulações globais
- Agente de Expansão Solstice[®] HFO – plantas comerciais e disponibilidade de produtos
- Honeywell, adoção global do Solstice[®] LBA e capacidades tecnológicas
- Substituição do HCFC-141b, agentes expansores alternativos
- Solstice[®] LBA, performance de isolamento térmico em espumas rígidas de poliuretano
- Casos de sucesso com o Solstice[®] LBA
- Conversão de Plantas
- Algumas considerações para o manuseio do Solstice[®] LBA: pressão de vapor
- Conclusões

Honeywell

\$40.5B

Vendas em 2017

Construindo um Mundo Confortável, Seguro e mais Sustentável

Honeywell Fluorine Products

Pioneiro no desenvolvimento de soluções com baixíssimo Potencial de Aquecimento Global PAG (LGWP)

Honeywell Fluorine Products possui no Portfolio gases refrigerantes, agentes expansores, solventes e aerossóis que possuem até **99.9% menor GWP** que as gerações anteriores.

Mercados

- Ar Condicionado e Refrigeração
- Construção
- Poliuretano – Isolamento Termico
- Espumas Flexíveis
- Containers e LNG
- Aerossóis e solventes

Produtos - Marcas

- **Solstice® HFO** refrigerantes, agentes expansor PU, aerossóis e solventes de limpeza.
- Enovate® 245fa agentes expansores
- Refrigerantes Genetron® & Perfromax™ LT
- Acido Fluorhídrico y BF3

Inovação da Honeywell = Cuidado com o Medio Ambiente

HFCs e HCFCs Baixo Pressão Global para Redução

Plantas Comerciais do Solstice® LBA e HFC-245fa

- Existem duas instalações para a produção do Enovate® 245fa no mundo.
- Plantas de escala Mundial e tecnologia de ponta nos USA que estão em operação desde 2014 para a fabricação do Solstice® LBA e do Solstice GBA, nossos HFOs.

© 2018 por Honeywell International Inc. Todos los derechos reservados.

Plantas Produtivas em Funcionamento

JV da Planta do 1233zd

- Expansão em Progresso da nova planta comercial na China para atender as demandas futuras dos nossos HFOs.

Isolamento Térmico Superior

Eficiência Energética Superior ao 141b, CP, e 245fa

LOW GWP HYDROFLUOROLEFINS (HFO)

Energy efficient insulation that is kinder to the planet

Honeywell

17% melhor vs Água
3% melhor vs HFCs

“The use of Honeywell’s Solstice LBA in the foam is helping us improve the energy efficiency of our refrigerators, which is beneficial not only to customers and manufacturers, but to society as a whole.”

Civiero Karim,
R&D Manager, Afinox Srl.

Whirlpool Corporation

Around 50% of Whirlpool’s global refrigeration portfolio utilizes hydrocarbon-based insulation and refrigerants. That commitment led Whirlpool, one of the world’s leaders in refrigeration, to seek out a more eco-friendly replacement for current blowing agents that would improve the energy efficiency and environmental performance of Whirlpool’s products. That search led to hydrofluoro-olefins (HFO) and Honeywell.

HFOs have the potential to significantly enhance the system energy efficiency of refrigerators while greatly reducing their environmental impact. Working with Honeywell, Whirlpool is developing a new HFO-based Fourth-Generation foam that combines a low GWP Global Warming Potential with superior insulating performance (lambda).

Not only will this approach improve Whirlpool’s products, but it will also contribute to a lower overall TEWI (Total Effective Warming Impact) at a country level thereby reducing the residential load on current power infrastructure and the associated CO₂ emissions.

HFOs Benefit For Refrigeration Fourth-Generation HFOs, such as Honeywell’s Solstice™ Liquid Blowing Agent, have the potential to deliver significant environmental and energy-efficiency benefits in the refrigeration sector while maintaining excellent appliance lambda performance (see fig. 1).

Figure 1: Lambda Comparison Appliance

Blowing Agent	245fa (CP)	245fa (CP) + 245fa (LBA)	245fa (CP) + HFO
Hydrocarbon (Cyclopentane)	15.0	15.0	15.0
Solstice LBA (HFO-optimized)	15.0	15.0	15.0
245fa (CP)	15.0	15.0	15.0
245fa (CP) + 245fa (LBA)	15.0	15.0	15.0
245fa (CP) + HFO	15.0	15.0	15.0

Energy Efficiency Improvement (refrigerator power consumption):
 - 245fa (CP) + 245fa (LBA): 11.5% improvement
 - 245fa (CP) + HFO: 10.4% improvement

Figure 2: Energy Efficiency Improvement (refrigerator power consumption)

Blowing Agent	Hydrocarbon (Cyclopentane)	Solstice LBA (HFO-optimized)
Hydrocarbon (Cyclopentane)	100%	100%
Solstice LBA (HFO-optimized)	100%	100%

In this time when the need to protect the environment has become a critical mandate, Solstice Liquid Blowing Agent can make an extremely positive impact.

“Fourth-Generation HFOs enable manufacturers such as Whirlpool Corporation to develop products that deliver superior energy efficiency while meeting consumer demand for performance. These innovations ensure that stringent global energy regulations can be satisfied, based on value driven solutions that exceed end-user expectations and remain wholly consistent with a low carbon future,” says Warwick Stirling, Senior Director - Global Sustainability, Whirlpool Corporation.

Honeywell Belgium NV
Gouverneur 1 - Haerdtse Research Park
3001 Haverle
Belgium
www.honeywell-solstice.com

8-10% melhor vs HC
2% melhor vs HFCs

“Fourth-Generation HFOs enable manufacturers such as Whirlpool Corporation to develop products that deliver superior energy efficiency while meeting consumer demand for performance. These innovations ensure that stringent global energy regulations can be satisfied, based on value driven solutions that exceed end-user expectations and remain wholly consistent with a low carbon future,” says

Warwick Stirling, Senior Director – Global Sustainability, Whirlpool Corporation.

CASE STUDY

Commitment to Sustainability and R&D Leads to Breakthrough Solution for Midea

“Midea is a global leader in the manufacture of energy-efficient appliances. Our planned use of a blend of HFC-245fa and Honeywell Solstice® LBA will provide us with the lowest-cost route to meet current and future energy standards.”

Sangjo Suk - Vice President, Refrigerator Division, Midea

The Challenge:
Midea is facing the challenge of meeting increasing energy efficiency requirements and environmental regulations globally.

The Solution:
Midea has developed a blended foam system using cyclopentane, HFC-245fa and Solstice® Liquid Blowing Agent, and is confident this blend will meet the changing global energy standards and regulations on GWP.

Midea Faced New Challenges With Each Generation of Blowing Agent Technology
There are many factors that impact a refrigerator’s efficiency and environmental footprint, but one of the most critical is having the best insulation performance so that OEMs can meet increasingly stringent energy standards while maintaining or reducing the cost of doing so. When it comes to the foam insulation’s thermal performance (the energy efficiency of the finished refrigerator / freezer), the key component is the foam blowing agent.

Ruling Out VIPs and Changes to Compressors
When Midea was exploring the factors needed to balance cost effectiveness and energy efficiency, they first tried optimizing the compressor, to improve the efficiency of the fixed frequency compressor (i.e., improve capacity), or changing to an inverter compressor, which could contribute 10-15 percent improvement in energy efficiency. However, the cost increase was around 100-150RMB per unit.
Then they tried installing vacuum insulated panels (VIPs), which can also provide a 10-15 percent energy improvement. However, the added cost was 300RMB per unit. Also, the fiberglass in today’s VIPs cannot readily be recycled and must be extracted from the unit before incineration adding an additional environmental consideration to their manufacture if proper disposal cannot be assured.

5-7% (245/CP) melhor vs CP
8% (245/CP/LBA) melhor vs CP

“Midea is a global leader in the manufacture of energy-efficient appliances. Our planned use of a blend of HFC-245fa and Honeywell Solstice® LBA will provide us with the lowest-cost route to meet current and future energy standards.”

Sangjo Suk - Vice President, Refrigerator Division, Midea

Casos de Sucesso

Solstice™ Liquid Blowing Agent – Energy Efficient, Low GWP Foam Blowing Agent for Reeler Containers

Reeler Container Evaluation
 Test Results: In September 2012, the first Solstice™ LBA blown foam insulated reeler container was produced at Yanzhou Tongde factory in close collaboration with the container reeler. Unit 45 and blowing agent supplier Honeywell, insulated with polyurethane foam formulated with Solstice LBA, the reeler container offers both high energy efficiency and low environmental impact. Also Solstice LBA shows excellent properties in foam production process including high flowability, even density distribution, good adhesion and fewer voids. It is most impressive that the reeler container has outstanding insulation performance under standard (Revised) Heat Leakage (RHL) test which is even better than HCFC-141b.

Thermal conductivity of Polyurethane foam

Revised Heat Leakage (ATR, L20)

High Energy Performance

- 5% lower heat leakage than 141b (ATR, L20)
- 10% lower heat leakage than 365/227 (ATR, L20)
- Could be seen better at in-service operating temperature
- Estimated electricity consumption less 5,000kwh per container during lifetime

Best Environmental Balance

- Minimal Global Warming Potential (GWP 1)
- No impact on the electroplating copper layer
- VOC-exempt
- Safe, non-flammable and acceptable toxicology
- Estimated CO₂ emission reduced by 43,000kg per container

Improved blowing process during reeler container production

- Proven substitute for 141b without sacrificing space of energy efficiency
- Commercial available

RESPONSIBLE CARE
 Honeywell and its subsidiaries and licensees, including the divisions of the Company, are committed to the protection of the environment. This commitment is reflected in our policies, procedures and programs. For more information, please visit our website at www.honeywell.com/responsiblecare.

Honeywell | Blowing Agents

Boxcold adota Solstice® LBA para criar valor a longo prazo em o setor de las cámaras frigoríficas

Solstice LBA se convirtió de inmediato en el sustituto de nuestro anterior HFC 365mfc/227ea ya que ofrecía buen rendimiento desde el principio. Casi no hicieron falta pruebas para incorporarlo en producción y muestra propiedades excelentes frente a HFC 365mfc/227ea. Lo más importante para nosotros, Solstice LBA posee un perfil medioambiental óptimo que encaja perfectamente en nuestra estrategia de negocio. En general, estamos muy contentos con el nuevo producto.^{1,2}

Marco Moscagiuri,
 Boxcold, jefe de producción

Caso práctico

Honeywell | Blowing Agents

SOLSTICE LIQUID BLOWING AGENT (LBA) HELPS DELIVER 15% ENERGY GAIN FOR OSO HOTWATER

Solstice® LBA

6% melhor HRL vs 141b

20% melhor vs Pentano

>17% melhor vs Água

10% melhor HRL vs 365/227

Solstice LBA was the preferred substitute for 141b without sacrificing space or energy efficiency. Estimated electricity consumption less 5,000 kwh per container during lifetime. Estimated CO₂ emission reduced by 43,000kg per container.

“Solstice LBA se convirtió de inmediato en el sustituto de nuestro anterior HFC 365mfc/227ea ya que ofrecía buen rendimiento desde el principio. Casi no hicieron falta pruebas para incorporarlo en producción y muestra propiedades excelentes frente a HFC 365mfc/227ea. Lo más importante para nosotros, Solstice LBA posee un perfil medioambiental óptimo que encaja perfectamente en nuestra estrategia de negocio. En general, estamos muy contentos con el nuevo producto.”

Marco Moscagiuri,
Boxcold, jefe de producción

“Solstice® LBA offers considerable advantages over other insulation blowing agents, increasing energy efficiency by up to 15 % and enabling us to achieve A-rated products within the scope of the Ecodesign Directive.”

Sigurd Braathen,
Managing Director OSO Hotwater

- Solstice LBA é fornecido como um gás liquefeito pressurizado (cylinders)
- É usado em estado LÍQUIDO.
- Pode ser armazenado em temperature ambiente de até 50°C. NÃO é necessário o resfriamento.
- Cilindros podem ser pressurizados com nitrogenio seco para ajudar na transferencia. Ar NÃO dever ser utilizado.

Classificação de Pressão dos tanques de Armazenamento

Agente de Expansão	Pressão de vapor @ 54 °C + 10 % Fator de segurança, kPa	Tanque Pressão de Desenho mínima, kPa*
HCFC-141b	230	446
Enovate® 245fa	433	446
Solstice® LBA	368	446

Solstice® LBA, Agente expensor:

- Pode ser manuseado em forma líquida.
- É Manuseável acima da temperatura ambiente.
- Possui grande compatibilidade com os materiais.
- São possíveis armazenar nas maiorias dos tanques utilizados para o HCFC-141b.
- Não Requer grandes esforços para a conversão.
- Pode ser utilizado os equipamentos utilizados nos HCFC-141b com pequenas modificações para a casa de sistemas e ao usuário final.

*Comprobar todos los requisitos reglamentarios y códigos aplicables para garantizar el cumplimiento si fuera aplicable.

Condição de Adição do Solstice[®] LBA em Sistemas Fechados de Mesclagem

- Temperatura da resina no momento de iniciar a adição do Solstice[®] LBA: Máximo 20°C
- O tubo de imersão/adicação deve adicionar o Solstice LBA por baixo do nível da resina no mesclador, preferenciamente no sentido do movimento da agitação para evitar turbulencia.
- Mantenha a agitação da resina durante todo o tempo da adição do Solstice LBA.
- Pressão no tanque mesclador: 2 bar máximo. (dependerá da velocidade de adição e da temperatura da resina)
- Pressão do N₂ no cilindro do Solstice LBA: 3 – 4 bar (6 bar máx)

Condição de Adición de Solstice® LBA em Sistema ABERTO de Mesclagem

Válvula de Segurança

Procedimento:

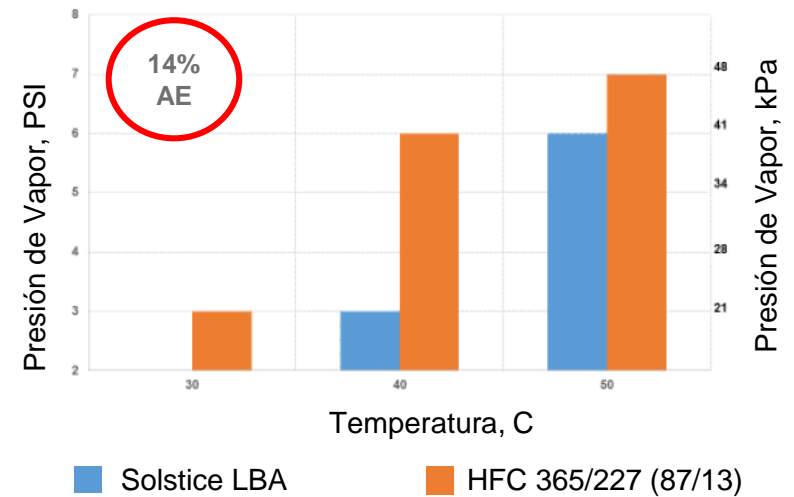

- Temperatura da resina no momento de iniciar a adição do Solstice® LBA: 10 – 15 C
- Conecte o cilindro do Solstice LBA a entrada com um tubo de adição.
- Adicione Solstice® LBA; verifique o peso adicionado através de uma balança.

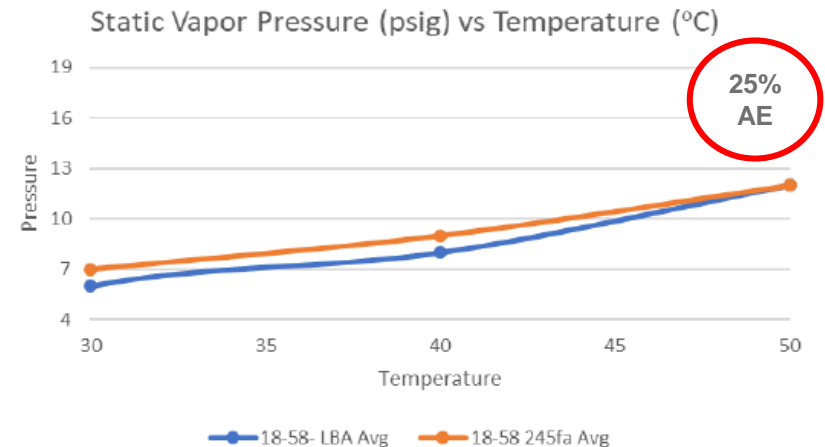

Solstice[®] LBA – Comparativo Pressão de Vapor

Ref. Williams, D.J., Singh, R.R., Zhu, Z. and Bowman, J.M. "Factor influencing the vapor pressure of polyol preblends containing Enovate[®] 3000 blowing agent and methos for vapor pressure management". Proceedings of Polyurethane Conference 2004. October 18-20, 2004 (Las Vegas, NV).

- A pressão de vapor depende da formulação (solubilidade, tipo de poliols, etc.)
- Solstice[®] LBA apresenta un comportamento similar a outros agentes espumantes com respeito à pressão de vapor.

Pressão de Vapor - Considerações

Agente Espumante	Pressão de Vapor @ 49 C +10% fator	Recomendação Pressão mínima do Tambor
HCFC – 141b	11.8 psig	50 psig
	0.81 bar	3,45 bar
	81.5 kPa	345 kPa
Solstice[®] LBA	36,3 psig	50 psig
	2,5 bar	3,45 bar
	250 kPa	345 kPa

CONCLUSÃO

- A transição aos agentes expansores mais amigáveis ao meio ambiente está ocorrendo em escala global.
- A solução da Honeywell Solstice® LBA permite a substituição do HCFC 141b e suas formulações de espumas rígidas com mínimas modificações.
- Solstice® LBA está sendo produzido em escala industrial desde 2014 e tem sido adotado comercialmente em todo o mundo.
- A Honeywell tem trabalhado nas soluções para todos os problemas de formulação com os HFOs, utilizando matérias primas convencionais em aplicações que requerem alta performance energética.
- Alteração mínimas nos procesos de produção na etapa da produção das resinas ao substituir o HCFC-141b para o Solstice® LBA.
- A Honeywell ajudará em todas as etapas do proceso de transição ao Solstice® LBA (Desenvolvimento, Otimização de Formulas, Conversão de Planta, Pressão de Vapor, Estabilidade, etc.)

Esperaremos sua visita!
